

POULTRY BUILDINGS

SPECIALISTS IN ALL ASPECTS OF POULTRY BUILDINGS

JAQUES

DESIGNED & BUILT TO LAST

HATCHERIES

HATCHERIES

With an unrivalled knowledge of construction in the poultry industry, the Jaques family have been successfully designing and constructing high quality poultry buildings for over 40 years. Hatchery construction projects range from the design and build of new, modern hatcheries, to the extension, expansion and refurbishment of existing facilities.

Functional, cost effective, bespoke steel buildings are designed with efficiency, durability and sustainability in mind, helping to build and future proof poultry businesses.

Designed and built to last using high quality materials, all hatchery units are designed and constructed in conjunction with third party companies:

- Incubation (setters and hatchers)
- Heating and ventilation engineers
- Electrical and plumbing contractors
- Automation equipment
- Groundworks and flooring contractors

Tailored specifications incorporate bespoke designs to include additional insulation, solar (PV) panels or green energy technology as required.

Biosecurity measures to protect against disease are incorporated as standard. These can include full shower facilities and changing areas.

Often incorporated in the design layout are staff welfare facilities and storage rooms for equipment & chemicals.

When extending, expanding or refurbishing existing facilities fire proof panels replace the existing fabric of the buildings and modern, durable, easy to clean surfaces are installed.

Future proof your business. Contact us today:
